I. Introduction

Insighta is an AI-based Non-Life Insurance Complaint Ticketing System designed to help insurance companies efficiently manage customer complaints and feedback. Many insurance organizations receive large volumes of concerns through different channels such as emails, online forms, and customer service desks. These complaints often involve sensitive matters such as billing concerns, insurance claims, account issues, and delays in services. Because many companies still rely on manual or rule-based systems, the process of categorizing, assigning, and resolving complaints can be time-consuming and inefficient. The Insighta system aims to address these challenges by providing an automated platform that simplifies complaint submission, tracking, and resolution for both customers and customer service staff.

The system allows customers to submit complaints or feedback through a web-based platform that automatically converts submissions into support tickets. Using Artificial Intelligence technologies such as Natural Language Processing (NLP) and sentiment analysis, the system can identify the type of complaint, determine the urgency level, and prioritize tickets that require immediate attention. This helps customer service representatives respond more quickly to critical concerns while reducing manual workload. The system also provides features such as ticket tracking, complaint categorization, and automated notifications, allowing customers to monitor the progress of their submitted concerns.

In addition, Insighta includes a management dashboard that provides analytical reports about complaint trends, resolution times, and customer satisfaction. These insights help organizations identify recurring issues and improve their services. Security and data protection are also incorporated through role-based access control, secure authentication, and activity monitoring to ensure that sensitive customer information remains protected. Through the integration of AI technologies and a centralized complaint management system, Insighta aims to improve operational efficiency, enhance customer satisfaction, and support better decision-making within insurance organizations.

II. Problem Statement & Objectives

Many insurance companies receive a large number of customer complaints and feedback through various channels such as emails, online forms, and customer service desks. Because many organizations still rely on manual or rule-based ticketing systems, staff members must manually read complaints, categorize them, assign them to the appropriate personnel, and track their progress until resolution. This process can be time-consuming, inefficient, and prone to human error. As a result, urgent complaints may not be prioritized properly, recurring issues may go unnoticed, and customers may experience delays in receiving responses or resolutions to their concerns.

Additionally, without a centralized and automated complaint management system, companies may struggle to analyze complaint trends and customer sentiment effectively. This limits the organization's ability to identify operational weaknesses and improve service quality. Customers may also find it difficult to track the progress of their submitted complaints, which can reduce transparency and trust in the company's services. To address these issues, an AI-based Non-Life Insurance Complaint Ticketing System called Insighta will be developed to provide an efficient and secure platform for submitting, tracking, and managing complaints and feedback.

To help improve the complaint handling process and customer service experience, the following objectives shall be achieved upon completion of the system:

- Create a secure web-based complaint ticketing system for customers, staff, and administrators.
- Allow customers and guest users to submit complaints or feedback through an online platform.
- Allow users to track the status of their submitted complaints using a ticket ID.
- Automatically generate and manage complaint tickets for proper tracking and organization.
- Use Artificial Intelligence techniques such as Natural Language Processing and sentiment analysis to classify complaints and determine urgency levels.
- Allow staff members to view, manage, and update assigned complaint tickets.
- Allow customers to receive notifications regarding updates or progress on their complaints.
- Allow customers to provide feedback after their complaints have been resolved.
- Allow administrators to manage complaint categories and oversee system operations.
- Provide a management dashboard with analytical reports showing complaint trends, resolution time, and customer satisfaction levels.
- Implement role-based access control and secure authentication to protect sensitive information within the system.

III. UN SDGs Addressed

According to the United Nations Sustainable Development Goals (SDGs), many global initiatives encourage the use of technology, innovation, and strong institutions to improve services and promote transparency. The development of the Insighta: AI-based Non-Life Insurance Complaint Ticketing System supports several SDGs by improving the efficiency of complaint management, strengthening customer service systems, and promoting responsible digital infrastructure within organizations. These include the following:

[Goal 8: Decent Work and Economic Growth](#) – This goal promotes productive employment and efficient work environments. By automating complaint classification, prioritization, and tracking, the system helps reduce repetitive manual work for customer service staff. This allows employees to focus on resolving important issues and improving service quality, which contributes to better workplace productivity and organizational growth.

[Goal 9: Industry, Innovation, and Infrastructure](#) – This goal emphasizes the importance of technological innovation and reliable digital infrastructure. The system integrates Artificial Intelligence technologies such as Natural Language Processing and sentiment analysis to automatically analyze customer complaints and determine urgency levels. Through this innovation, the system modernizes traditional complaint management processes within insurance organizations.

[Goal 16: Peace, Justice, and Strong Institutions](#) – This goal promotes transparency, accountability, and strong institutions. The complaint ticketing system improves transparency by allowing customers to track the progress of their complaints and ensuring that concerns are properly recorded and addressed. Features such as role-based access control, activity logging, and secure authentication also support accountability and data protection within the organization.

Although the system primarily focuses on improving complaint management in the insurance sector, it contributes to broader sustainable development goals by promoting technological innovation, operational efficiency, transparency, and improved customer service. Through these contributions, the Insighta system supports the development of more reliable and accountable digital services within modern organizations.

IV. Scope of the Project

This web application consists of user-friendly services that focus on improving the management of customer complaints and feedback for non-life insurance services. The system allows customers and guest users to submit complaints or feedback through an online platform where their concerns are automatically converted into support tickets. Through this platform, users can track the progress of their complaints using a unique ticket ID, allowing them to stay informed about the status and resolution of their concerns. The system also incorporates Artificial Intelligence technologies such as Natural Language Processing and sentiment analysis to classify complaints and determine their urgency level, helping staff members prioritize and resolve issues more efficiently.

The operations of the web application are limited within the insurance organization where customer service staff and administrators manage complaint tickets and system data. Staff members are responsible for reviewing submitted complaints, updating ticket statuses, and communicating updates to customers. Administrators of the system have the authority to manage complaint categories, oversee ticket records, and monitor system performance through an analytical dashboard.

For the features of the web application, customers and guest users can submit complaints or feedback and track the status of their submitted tickets. Staff members can view assigned tickets, update complaint statuses, and handle the resolution process. The admin has the authority to manage system settings, generate reports, and analyze complaint trends through the management dashboard in order to improve customer service operations and decision-making within the organization.

V. Functional / Non-functional Requirements

Name	Requirements
Functional Requirements	
Landing Page with Capabilities and Workflow	The website should have a home page that provides a comprehensive overview of the platform's AI-assisted complaint management capabilities and the end-to-end workflow from submission to resolution.
Guided Complaint Submission Form	Users must be able to submit complaints through a guided intake form that captures essential details such as title, description, issue category, and supporting evidence.
Anonymous Guest Submission	The system should allow non-registered/guest users to submit complaints by providing a valid email address for contact and tracking purposes.
Guest Complaint Tracking	Guest users should be able to track the real-time status and progress of their submitted complaints using a unique, secure access token provided upon submission.
AI-Assisted Triage and NLP Enrichment	The system should automatically analyze the content of submitted complaints using Natural Language Processing (NLP) to detect sentiment, intent, priority level, and suggested categorization.
Staff Ticket Workspace	Internal staff members should have a dedicated workspace to view, review, classify, and route assigned complaint tickets for fast queue management.

Complaint Category Management	Administrators must be able to add, update, and delete complaint categories used for sorting and AI-assisted triage to ensure the system reflects current business needs..
Staff and User Management	Administrators shall be able to add (register) new staff members and manage existing user profiles, including the ability to update roles and permissions or delete inactive accounts.
Customer Feedback and Ratings	The system should allow customers to add structured feedback and ratings for resolved tickets, and allow staff to view and manage these testimonials for service quality analysis.
Admin Oversight Dashboard	Administrators shall easily manage complaint resolutions and staff assignments to the client's tracking page, as well as output resolution outcomes and ticket categories with ease.

Name	Requirements
Non - Functional Requirements Product Requirements	
Usability	The website should be intuitive and user-friendly, allowing customers to submit complaints and track their status with minimal guidance. The administrative workspace should feature clear navigation and organized data views to facilitate efficient queue management.
Performance	The website should load quickly, and all functionalities—including asynchronous NLP analysis—should work seamlessly without any perceived delay.
Compatibility	The website should be compatible with all modern web browsers, including Chrome, Firefox, Safari, and Edge.
Maintainability	The website should be easy to maintain, with clear documentation and a user-friendly management system for categories and NLP rules.
Mobile responsiveness	The website should be optimized for mobile devices, with a responsive design that adapts to different screen sizes for both customer submissions and staff reviews.
Dependability Requirements	

Reliability

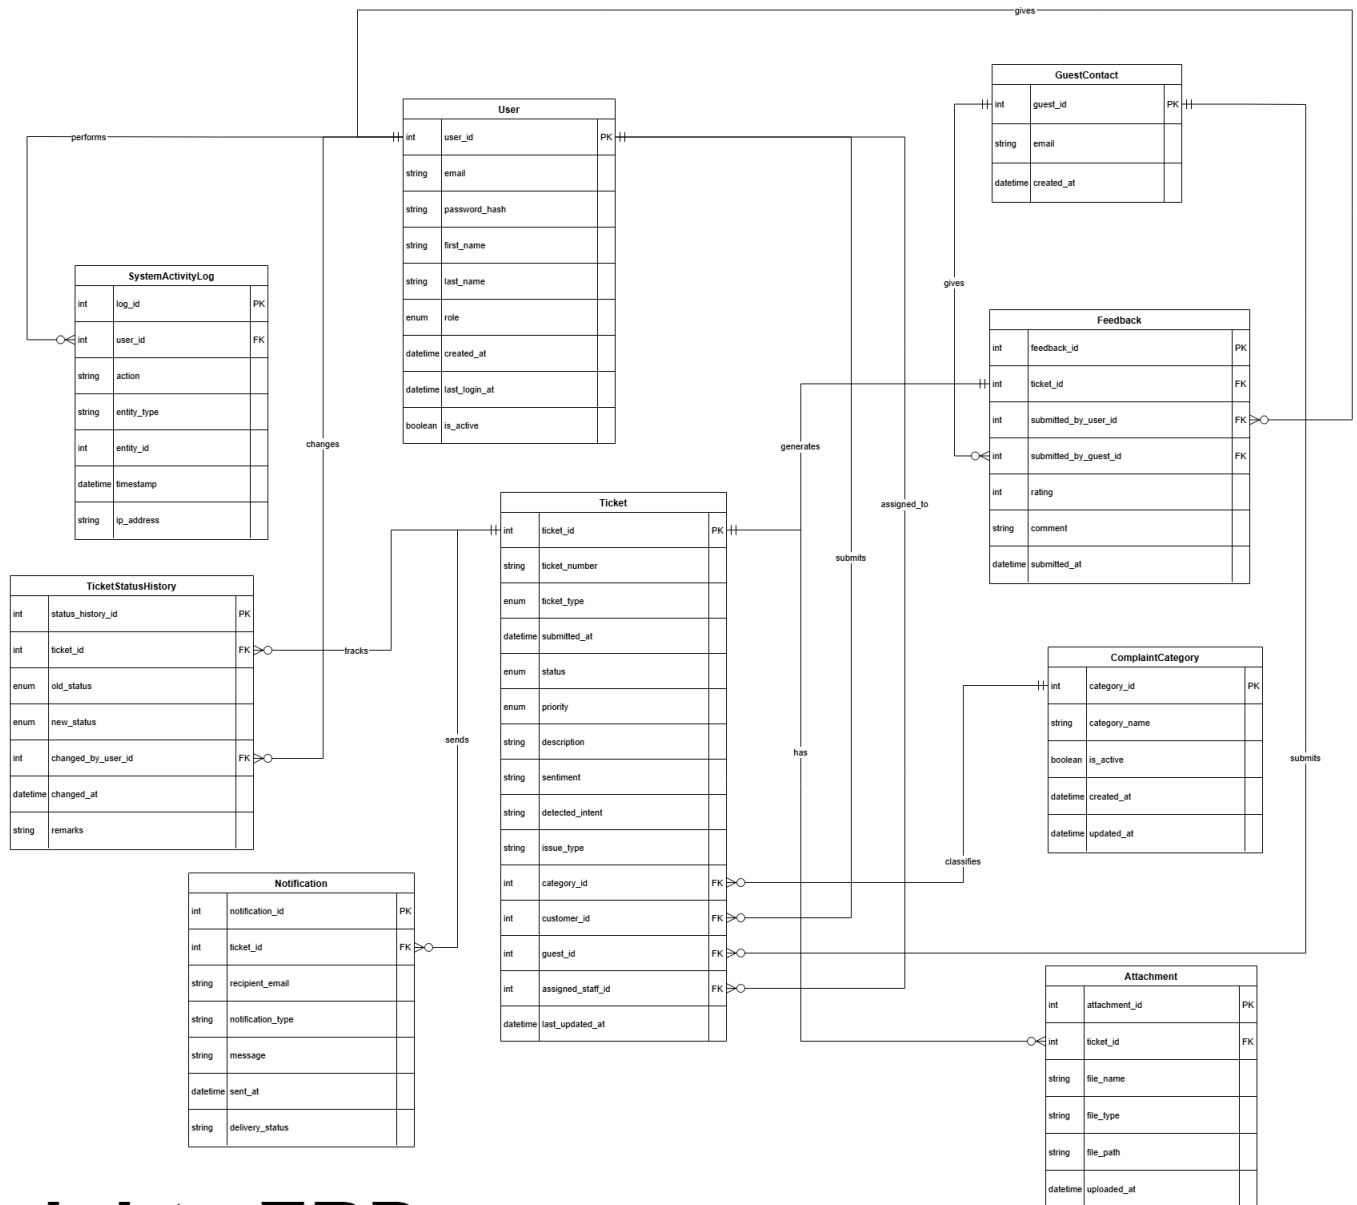

Inputting incorrect log-in credentials would alert the user and redirect them to the login page.

Authorization process of the administrator should have a 100% match before accessing the feature and the services of the software.

Information that is entered or updated by the administrator at any time of day shall be accurately reflected in the system, particularly on both the client (customer) and admin side.

Availability	The complaint management and tracking services of the system should only be available to authenticated users in the database or guests with valid access tokens.
Security Requirements	
Integrity	Information that is deleted or modified by the administrator (such as ticket categories or NLP rules) shall be validated before being committed to the database.
Confidentiality	Passwords and sensitive customer identifiers should not be visible at any time and must be handled using secure encryption/hashing standards.
Authentication	Clients must input the right information to successfully log in at the first time. Services that allow for denying, approving, or escalating complaint tickets, as well as managing system categories, shall only be accessible to the administrator and authorized staff roles.
External Requirements	
Legislative Requirements	The administrator shall protect the personal information of the clients in accordance to the Data Privacy Act of 2012 The system shall ensure that all complaint handling and non-life insurance dispute resolutions comply with relevant insurance industry regulations and consumer protection laws.

VI. Database Design (ERD)

Insighta ERD

For the database design, the system uses Supabase to store and manage the application data. Supabase is an open-source Backend-as-a-Service (BaaS) built on top of PostgreSQL, which provides a relational database, authentication, and secure API access for web applications. The database is designed to handle complaint submissions, ticket tracking, user management, and system monitoring. The design contains several tables that store and manage the information needed for the complaint ticketing system. These tables include User, Ticket, ComplaintCategory, GuestContact, Attachment, TicketStatusHistory, Notification, Feedback, and SystemActivityLog.

The **User** table stores the information of registered users such as customers, staff members, and administrators. It contains fields such as user ID, email, password hash, first name, last name, role, account creation date, last login date, and account status. Each user can interact with the system depending on their assigned role.

The **Ticket** table contains the main records of complaints or feedback submitted through the system. It includes information such as ticket number, ticket type, submission date, status, priority, complaint description, detected sentiment, intent classification, issue type, and references to related users or guests. Each ticket can be associated with multiple related records such as attachments, notifications, and status history updates.

The **ComplaintCategory** table stores the different categories of complaints, such as billing issues, claims issues, or account-related concerns. Each ticket is classified under one category to help organize and analyze complaint data. Administrators can manage these categories by activating or deactivating them when necessary.

The **GuestContact** table stores the email addresses of users who submit complaints without registering an account. This allows guest users to submit concerns and receive updates regarding their tickets.

The **Attachment** table stores files uploaded by users when submitting complaints. These files may include screenshots or supporting documents. Each attachment record contains the ticket ID it belongs to, the file name, file type, file path, and the upload timestamp. A single ticket may have multiple attachments.

The **TicketStatusHistory** table records the history of status changes for each ticket. It stores the previous status, the new status, the user who made the change, the date and time of the update, and optional remarks. This table helps maintain an audit trail of ticket progress.

The **Notification** table stores information about notifications sent to users regarding ticket updates. It includes the ticket ID, recipient email, notification type, message content, delivery status, and the time the notification was sent.

The **Feedback** table stores customer satisfaction feedback after a complaint has been resolved. It includes the ticket reference, the user or guest who submitted the feedback, a rating score, optional comments, and the submission date.

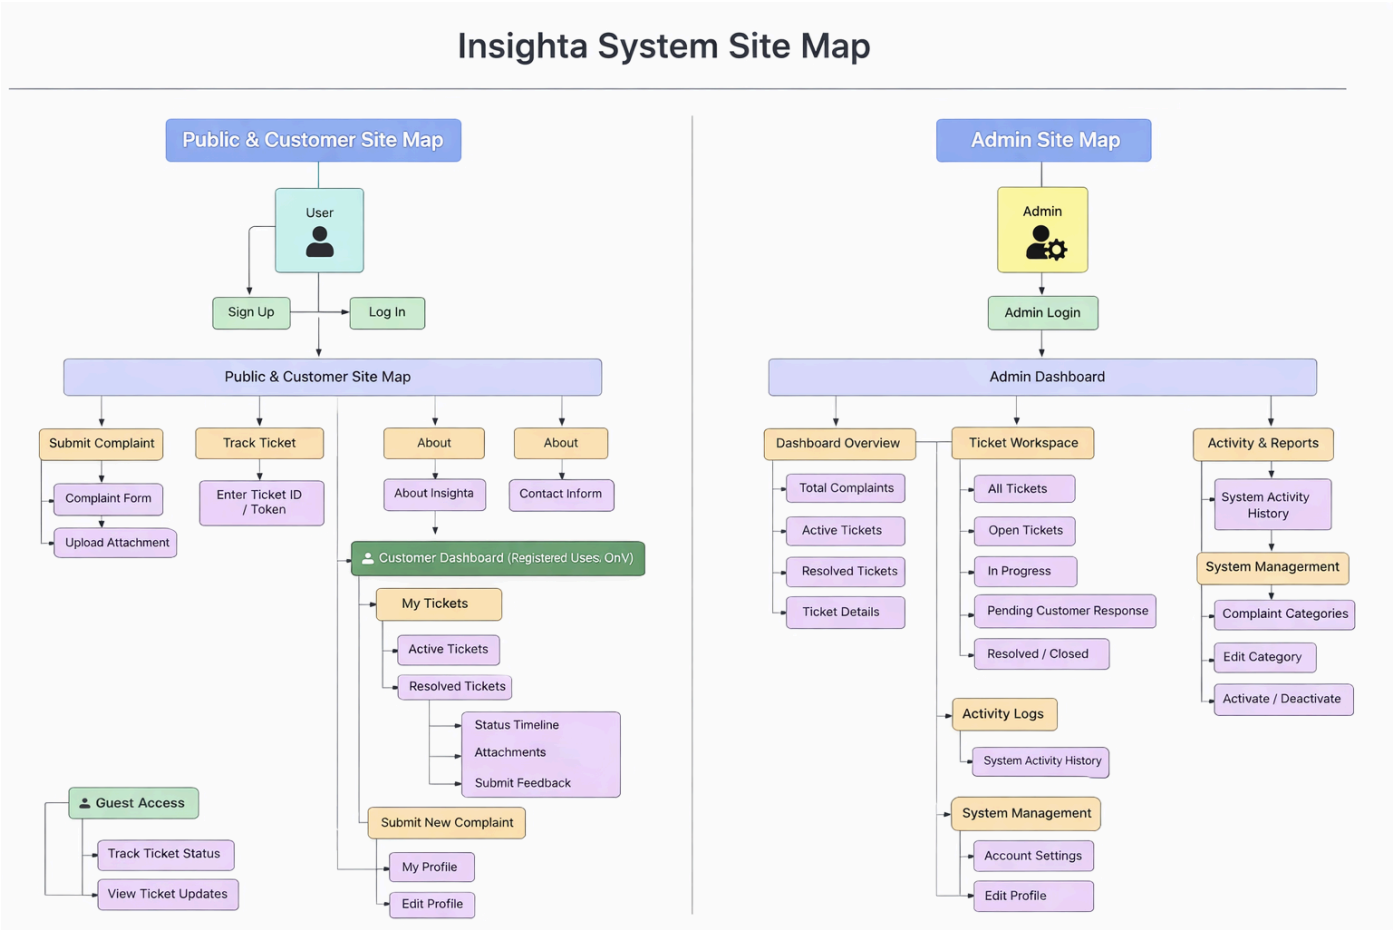

Finally, the **SystemActivityLog** table records system actions performed by users, such as login activities and system changes. It stores the user ID, action performed, entity affected, timestamp, and IP address. This table helps maintain security and track system activities.

Overall, the database structure allows Insighta to efficiently manage complaints, monitor ticket progress, store supporting files, track system activities, and analyze customer feedback

while maintaining secure and organized data management.

VII. Features of the System

Sitemap

Sitemap Description

This sitemap serves as a blueprint of the web application's structure containing the contents and the list of all the pages within the Insighta system. It allows users to navigate the system's features and information easily and efficiently. There are two sitemaps shown above: one for the public/customer side and another for the admin side. These sitemaps illustrate how users interact with the system depending on their role and level of access.

The main entry point of the system is the Landing Page, where public visitors can see an overview of the Insighta complaint ticketing system, including its purpose and the services it provides. From this page, users can navigate to the Submit Complaint, Track Ticket, About, and Customer Login or Registration pages. The Submit Complaint page allows users to submit complaints or feedback regarding non-life insurance services. This page contains a complaint form that asks users to provide relevant information such as their name, email address, complaint category, and a detailed description of their concern. Users may also upload supporting attachments such as documents or screenshots to provide additional evidence for their complaint.

The Track Ticket page allows users to check the status of their complaint by entering their ticket ID or secure access token. Once submitted, the system will display the current status of the ticket, including updates on whether the complaint is under review, in progress, pending customer response, resolved, or closed. Guest users who submit complaints without creating an account can still access their complaint status through the Guest Ticket View, which provides secure access using a unique tracking token sent to their email.

For registered customers, logging into the system will redirect them to the Customer Dashboard, which provides an overview of their recent complaint activities. From this dashboard, users can access the My Tickets page, where they can view a list of all their previously submitted and currently active complaints. Each ticket can be opened to display detailed information such as the complaint description, current status, ticket timeline, attachments, and system updates. Once a complaint has been resolved, users may also provide feedback regarding the service they received. The Profile Settings page allows registered users to view and update their personal information such as name, email address, and contact details.

As for the admin side, administrators have access to a specialized workspace designed for managing and monitoring the entire complaint ticketing system. After logging in through the Admin Login page, administrators are redirected to the Admin Dashboard, which displays an overview of system metrics such as the total number of complaints, active tickets, resolved cases, and complaint sentiment summaries.

The Ticket Workspace allows administrators and staff members to review and manage all submitted complaints. From this page, administrators can view tickets categorized by their current status such as open, in progress, pending customer response, resolved, or closed. Administrators can assign tickets to staff members, update ticket statuses, and manage the complaint resolution process.

The system also includes an Analytics Dashboard that provides detailed reports on complaint trends, resolution times, and customer satisfaction levels. This page allows administrators to analyze recurring issues and improve service operations. Additionally, the Activity Logs page records all system actions such as login attempts and ticket updates, ensuring

transparency and security within the system.

Under the System Management section, administrators can manage different components of the system such as complaint categories, staff accounts, and system configuration settings. The Category Management page allows administrators to add, update, activate, or deactivate complaint categories used for classifying tickets. The Staff Profiles and Staff Registration pages allow administrators to manage staff accounts responsible for handling customer complaints. The Admin Profile Settings page allows administrators to update their account information and manage their login credentials.

Through the implementation of this sitemap, the Insighta system ensures that all pages and features are well organized, allowing users and administrators to navigate the system easily while maintaining an efficient workflow for complaint submission, tracking, and resolution.

VIII. Communication Letter

Project Title: Insighta | Complaint Ticketing System

Project Start Date: February 20, 2026

Project End Date: March 11, 2026

Summary of Project:

Insighta is an AI-based non-life insurance complaint ticketing system developed as a secure web application for handling customer complaints and feedback. It supports complaint submission, ticket generation and tracking, AI-assisted classification and prioritization, staff handling, feedback collection, management reporting, and role-based security controls. The project aims to modernize complaint handling by improving speed, visibility, and service quality while also supporting data-driven management and regulatory compliance.

Project Outcome:

Upon completion, Insighta is expected to deliver a centralized and intelligent complaint management platform that enhances operational efficiency, improves customer experience, and provides actionable insights for management. The system will enable faster response times, better complaint prioritization, secure access to sensitive information, and improved monitoring of service quality through analytics and feedback data.

Project Sign-off:

By signing this document, the project client and project members confirm that the project has been completed to the satisfaction of all stakeholders.

IX. Acceptance Letter

February 18, 2026

Malayan Insurance Philippines
Integrated Marketing Communications
ETY Building, Quintin Paredes, Binondo, Manila

Dear Mr. Guanzon:

We hope this letter finds you well. We are Computer Science students of **Mapúa University** under the course **ITS122L/BM1 - Web Systems and Technologies 2 Laboratory**. As part of our course requirements, we are proposing to develop **"Insighta: A Non-Life Insurance AI Complaint Ticketing System"** for **Malayan Insurance Philippines**.

The proposed system is a secure, web-based ticketing platform where customers may submit complaints and feedback, which are then converted into trackable tickets. It includes ticket status tracking, staff handling workflows, and a management dashboard for reporting and monitoring. The system also includes AI-assisted analysis, such as intent/issue classification and sentiment-based prioritization, to support faster complaint handling.

Data Privacy Notice

To ensure confidentiality and avoid any privacy risk, this project will **NOT** require, request, store, or process any real customer/company data from your organization.

All testing, demonstrations, and reports will **use ONLY mock or synthetic data** (such as simulated complaint messages, dummy ticket records, and fictional user accounts) to demonstrate the end-to-end workflow. **NO production database access, NO live integrations, and NO real policyholder information will be involved at any stage.**

Our group will handle the full development lifecycle, including requirements implementation, database design, UI development, and system testing based on the agreed scope and specifications.

If you have any questions, concerns, or suggestions regarding the project scope, we are open to clarifications and feedback to ensure our deliverables match expectations within the academic timeline.

With this, we respectfully request your **approval/acceptance** to proceed with the development of the project for academic purposes.

Thank you for your time and consideration.

Sincerely,

Cloie Sofia Dela Cruz

X. Test Results

TEST SCRIPT #:	1
TITLE:	Site Availability
CREATED BY:	Eugene Carl Dela Cruz
DATE TESTED:	March 1, 2026
PRE-CONDITION:	Access to browser and Internet
TEST SCENARIO:	Verify that the user can access the Insighta site through the internet.

ID#	Description	Steps to Execute	Expected Results	Actual Results	Pass/Fail
TC1	Verify that the user can access the Insighta website via browser	1.) Open a web browser 2.) Navigate to the Insighta website URL	The Insighta homepage loads successfully with the navigation bar, hero section, and content visible	The Insighta homepage loads successfully with the navigation bar, hero section, and content visible	Pass
TC2	Verify that the navigation bar items are visible and properly labeled	1.) Navigate to the Insighta homepage 2.) Observe the navigation bar	Navigation bar displays: Home, About, Submit a Ticket, Track Ticket, Feedback, Login, and Register button	Navigation bar displays: Home, About, Submit a Ticket, Track Ticket, Feedback, Login, and Register button	Pass
TC3	Verify that the hero section displays the correct content	1.) Navigate to the Insighta homepage 2.) Observe the hero section	Hero section shows headline text, 'Submit a Complaint' and 'Track a Ticket' buttons, and the Queue Preview widget	Hero section shows headline text, 'Submit a Complaint' and 'Track a Ticket' buttons, and the Queue Preview widget	Pass

TC4	Verify that the 'Submit a Complaint' button on the hero section is clickable	1.) Navigate to the Insighta homepage 2.) Click the 'Submit a Complaint' button	User is redirected to the Submit a Ticket page	User is redirected to the Submit a Ticket page	Pass
TC5	Verify that the 'Track a Ticket' button on the hero section is clickable	1.) Navigate to the Insighta homepage 2.) Click the 'Track a Ticket' button	User is redirected to the Track Ticket page	User is redirected to the Track Ticket page	Pass

TEST SCRIPT #:	2
TITLE:	Account Registration
CREATED BY:	Ralf Cedric Zabala
DATE TESTED:	March 2, 2026
PRE-CONDITION:	Access to Insighta site
TEST SCENARIO:	Verify that the user can register a new account.

ID#	Description	Steps to Execute	Expected Results	Actual Results	Pass/Fail
TC1	Verify that the user can navigate to the Register page	1.) Access the navigation bar 2.) Click the 'Register' button	User is directed to the Sign Up / Registration page	The Sign Up page opens after clicking the Register button	Pass
TC2	Verify that the user can input a valid first name	1.) On the Registration page, locate the 'First Name' field 2.) Enter a valid first name	The entered first name is displayed in the First Name field	The input is shown within the first name field	Pass
TC3	Verify that the user can input a valid last name	1.) Locate the 'Last Name' field 2.) Enter a valid last name	The entered last name is displayed in the Last Name field	The input is shown within the last name field	Pass
TC4	Verify that the user can input a valid username	1.) Locate the 'Username' field 2.) Enter a desired username	The entered username is displayed in the Username field	The input is shown within the username field	Pass

TC5	Verify that the user can input a valid password	1.) Locate the 'Password' field 2.) Enter a desired password	The password input is masked and shown within the Password field	The masked input is shown within the password field	Pass
TC6	Verify that the user can input a valid email address	1.) Locate the 'Email' field 2.) Enter a valid email (username@domain.com)	The entered email is displayed in the Email field	The input is shown within the email field	Pass
TC7	Verify that the user can input a valid 11-digit mobile number	1.) Locate the 'Mobile Number' field 2.) Enter an 11-digit mobile number	The entered mobile number is displayed in the Mobile Number field	The input is shown within the mobile number field	Pass
TC8	Verify that the user can successfully register an account	1.) Fill in all fields with valid input 2.) Click the 'Sign Up' button	Registration is successful; user is redirected to the homepage with a new account created	The homepage is opened after successful registration	Pass
TC9	Verify that the user cannot submit an empty registration form	1.) Leave all fields empty 2.) Click the 'Sign Up' button	Form prompts that the First Name field is required and does not submit	The form prompts the user to fill out the First Name field	Pass
TC10	Verify that the user cannot submit with only the first name filled	1.) Enter a valid first name only 2.) Click the 'Sign Up' button	Form prompts that the Last Name field is required and does not submit	The form prompts the user to fill out the Last Name field	Pass
TC11	Verify that the user cannot submit with an invalid email format (missing '@')	1.) Fill in all fields with valid input except email (omit '@') 2.) Click the 'Sign Up' button	Form prompts that '@' is missing in the email and does not submit	The form prompts the user that '@' is missing in the Email field	Pass
TC12	Verify that the user cannot submit with an already registered email	1.) Fill in all fields using a previously registered email 2.) Click the 'Sign Up' button	A message appears informing the user that the email address is already registered	The message has appeared for the user	Pass

TC13	Verify that the user cannot submit with an already registered mobile number	1.) Fill in all fields using a previously registered mobile number 2.) Click the 'Sign Up' button	A message appears informing the user that the mobile number is already registered	The message has appeared for the user	Pass
TC14	Verify that the user cannot submit with an invalid mobile number (not 11 digits)	1.) Fill in all fields; enter fewer or more than 11 digits in the Mobile Number field 2.) Click the 'Sign Up' button	A message prompts the user to enter exactly 11 digits	The message has appeared for the user	Pass

TEST SCRIPT #:	3
TITLE:	Login
CREATED BY:	Cloie Dela Cruz

TEST SCRIPT #:	7
TITLE:	Admin / Staff Workflow
CREATED BY:	Eugene Carl Dela Cruz
DATE TESTED:	March 7, 2026
PRE-CONDITION:	Staff or admin account must be available; tickets must exist in the system
TEST SCENARIO:	Verify that the staff/admin can manage and act on complaint tickets through the Staff Workflow.

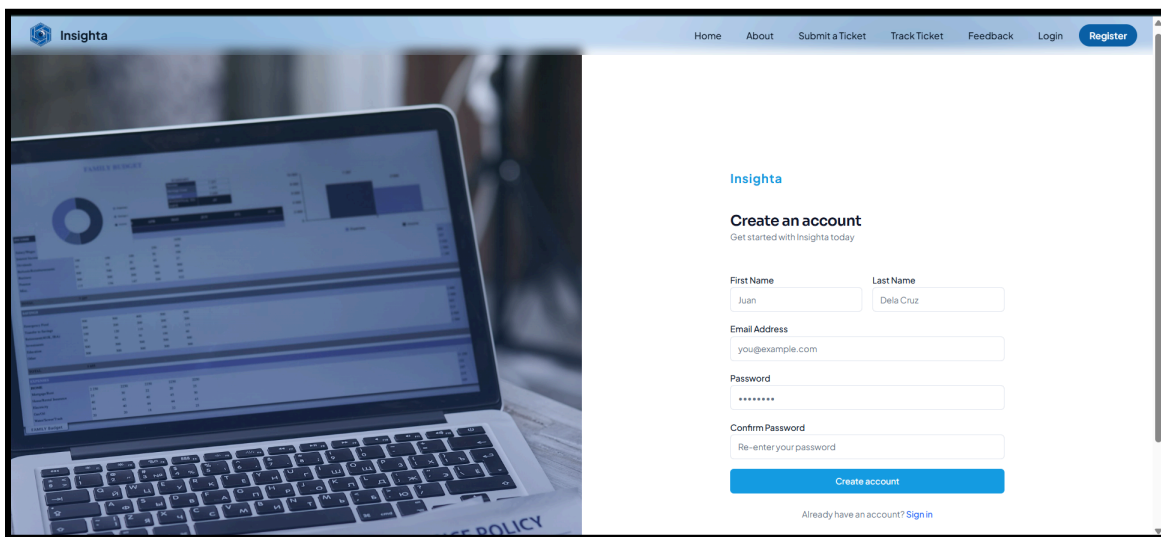

ID#	Description	Steps to Execute	Expected Results	Actual Results	Pass/Fail
TC1	Verify that the staff/admin can access the Staff Workflow / Ticket Workspace	1.) Log in with a staff or admin account 2.) Navigate to the Ticket Workspace or Staff Workflow section	The Ticket Workspace is displayed showing Assigned, Unassigned, and All ticket tabs	The Ticket Workspace opens with all tabs visible	Pass
TC2	Verify that the Assigned tab displays tickets assigned to the current staff	1.) In the Ticket Workspace, click the 'Assigned' tab	Only tickets assigned to the logged-in staff member are displayed	Assigned tickets are displayed correctly	Pass
TC3	Verify that the Unassigned tab displays tickets not yet assigned to any staff	1.) In the Ticket Workspace, click the 'Unassigned' tab	Only unassigned tickets are displayed	Unassigned tickets are displayed correctly	Pass
TC4	Verify that the All tab displays all tickets in the system	1.) In the Ticket Workspace, click the 'All' tab	All tickets regardless of assignment status are displayed	All tickets are displayed in the All tab	Pass

TC5	Verify that the staff can search for a ticket by ticket ID in the workspace	1.) In the Ticket Workspace, locate the search bar 2.) Enter a ticket ID (e.g., TKT-2048)	The ticket matching the search ID is displayed in the results	The correct ticket is displayed in search results	Pass
TC6	Verify that the staff can open a ticket for review	1.) Locate a ticket in the Ticket Workspace 2.) Click the 'Open Ticket' button or arrow	The full ticket details page opens showing complaint info, status, category, and priority	The ticket detail page opens with all relevant information	Pass
TC7	Verify that escalated and high-priority tickets are visually flagged	1.) Open the Ticket Workspace 2.) Observe tickets with escalation or priority tags	Escalated tickets show an 'Escalated' tag and high-priority tickets show a 'High' tag in distinct colors	Escalated and High priority tags are displayed with correct color coding	Pass
TC8	Verify that the staff can update the status of a ticket	1.) Open a ticket 2.) Change the ticket status (e.g., from Assigned to Resolved) 3.) Save/confirm the change	The ticket status is updated successfully and reflected in the Ticket Workspace	The ticket status is updated and visible in the workspace	Pass
TC9	Verify that the admin can assign an unassigned ticket to a staff member	1.) Navigate to the Unassigned tab 2.) Select an unassigned ticket 3.) Assign it to a staff member	The ticket is moved from Unassigned to the assigned staff member's queue	The ticket is successfully assigned and appears in the staff member's Assigned tab	Pass
TC10	Verify that the staff can escalate a ticket	1.) Open an assigned ticket 2.) Select the escalate option 3.) Confirm escalation	The ticket is marked as Escalated and the appropriate tag appears on the ticket	The Escalated tag appears on the ticket after escalation	Pass

XI. The System

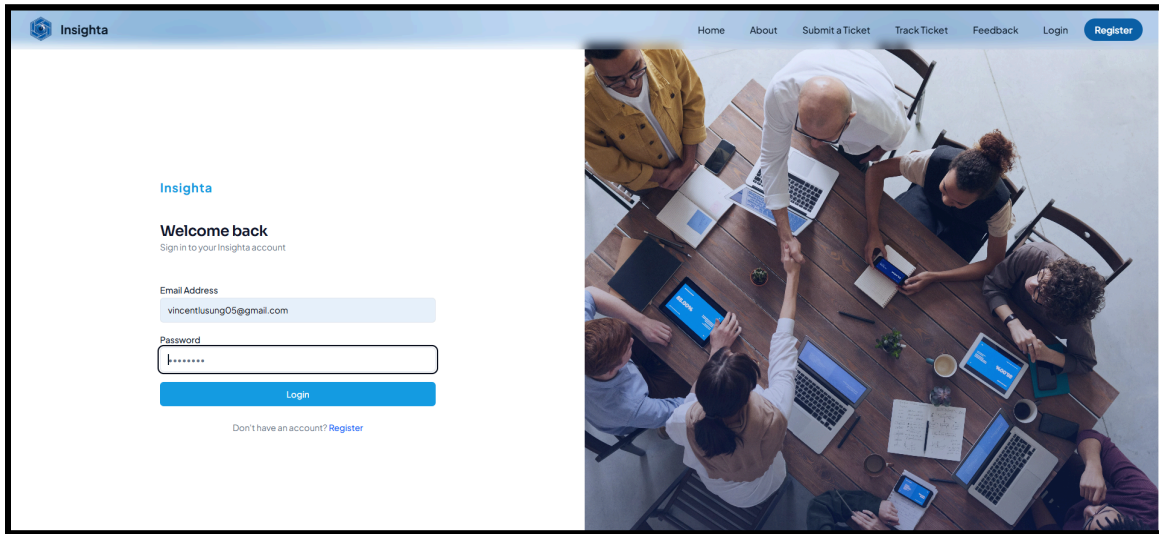

Sign Up Page

The sign-up page is a web page that allows users to create a new account for a website or application. The sign-up page is the first step in onboarding new users and collecting information necessary for creating their account. It includes a form to enter user information. This form includes fields for the user's first name, last name, username, password, email address, and mobile number. The "Sign Up" button is used to submit the user's information and create their account.

The image shows a web browser displaying the 'Insighta' sign-up page. On the left, a laptop screen shows a dashboard with various charts and data tables. The main content area on the right is the sign-up form. At the top, the 'Insighta' logo is on the left, and navigation links (Home, About, Submit a Ticket, Track Ticket, Feedback, Login, Register) are on the right. The sign-up section is titled 'Create an account' with the subtitle 'Get started with Insighta today'. It contains input fields for 'First Name' (filled with 'Juan'), 'Last Name' (filled with 'Dela Cruz'), 'Email Address' (filled with 'you@example.com'), 'Password' (masked with dots), and 'Confirm Password' (with the placeholder 'Re-enter your password'). A blue 'Create account' button is at the bottom of the form. Below the button, there is a link: 'Already have an account? Sign in'.

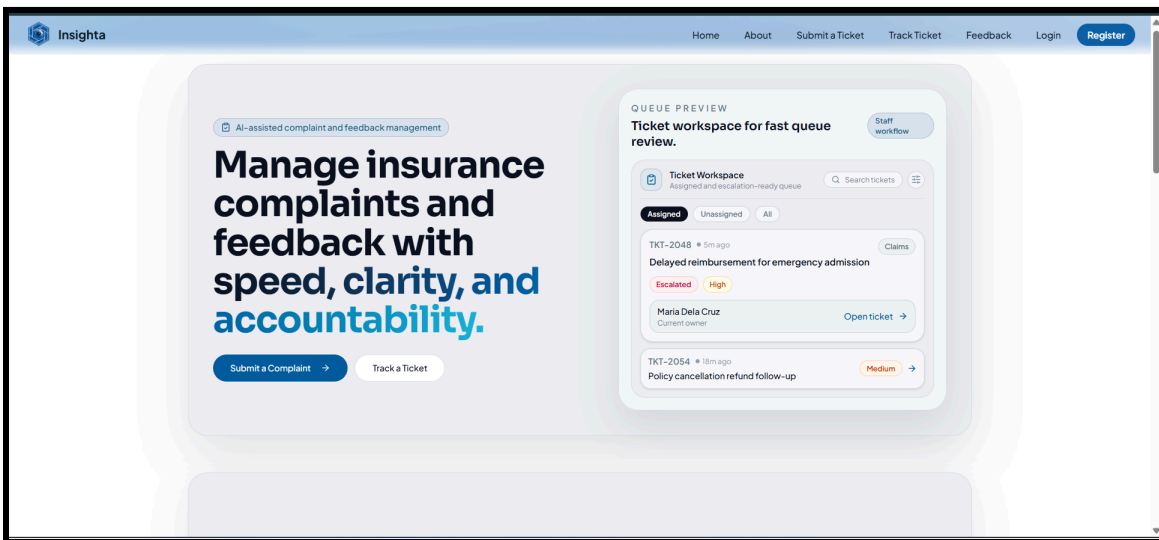

Login Page

The Login page is a web page where users can enter their credentials, such as username and password, to gain access to the main features of the website. It has a username field and a password field where users enter their username and password associated with their account. The "Login" button is used to submit the login credentials and authenticate the user.

Home Page

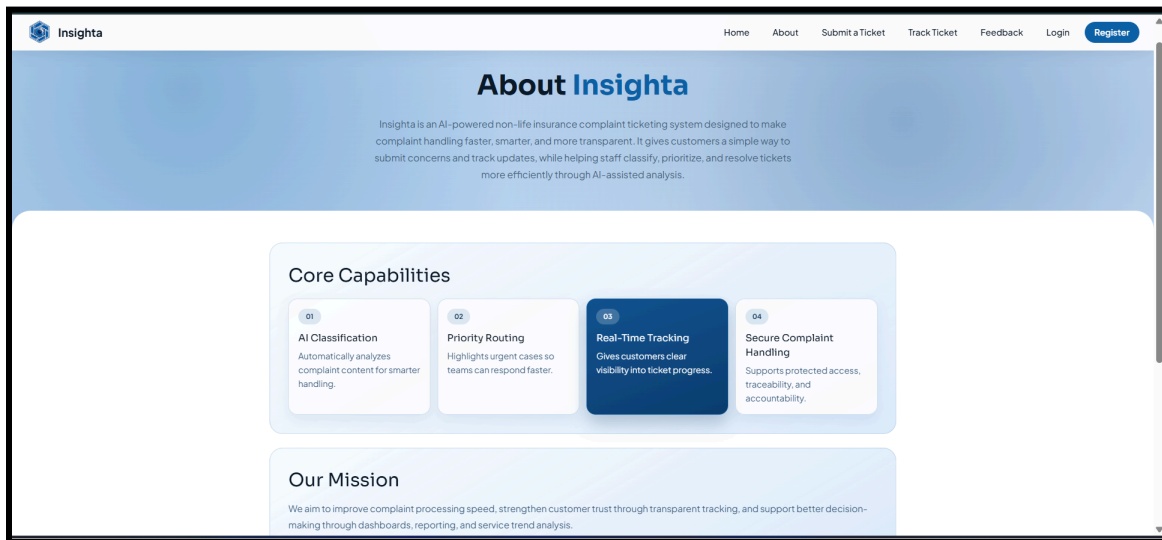

The Home page is the main page of a website that serves as a gateway to the rest of the site's content. It is the first page that users see when they visit a website and is designed to provide an overview of the site's purpose and content. It contains a header that includes the website's logo and a navigation menu. Moreover, the organization's vision and mission can also be seen here.

About Us

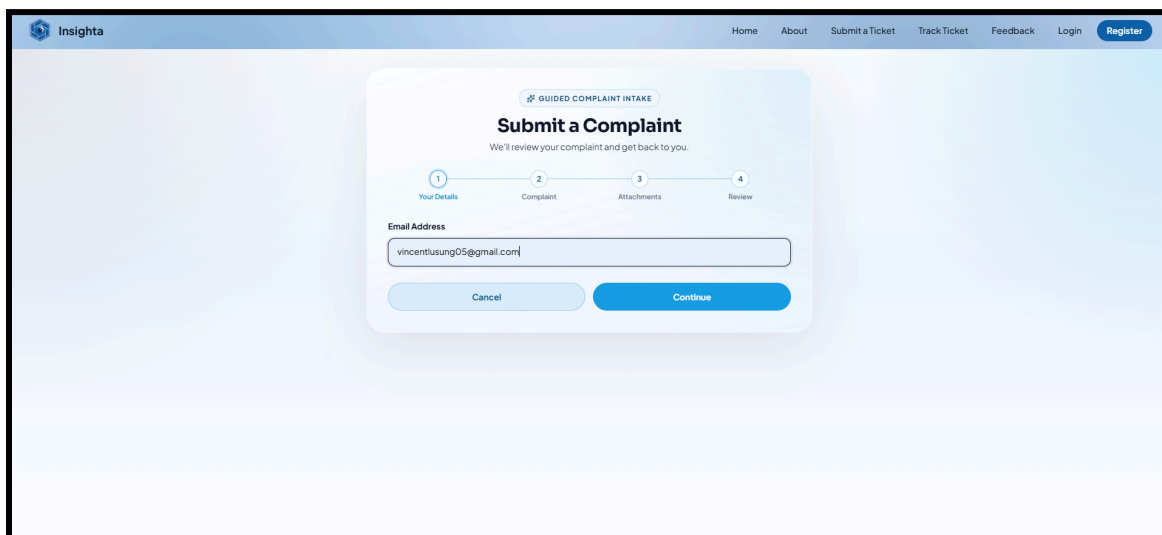

The About Us page contains information about the Insighta system and its purpose in improving the complaint management process for non-life insurance services. This page provides an overview of the system's goals, which include helping organizations manage customer complaints more efficiently, improving transparency in complaint handling, and enhancing overall customer service. It explains how the system allows customers to submit complaints or feedback through an online platform and track the progress of their submitted

concerns.

Ticket Submission

The Ticket Submission page allows users to report complaints or feedback regarding non-life insurance services. It contains a form where users provide details such as their name, email address, complaint category, and a description of their concern. Users may also upload supporting files to provide additional information. Once the form is submitted, the system automatically generates a unique ticket ID that can be used to track the status of the complaint.

BackSubmit Complaint

Track Ticket

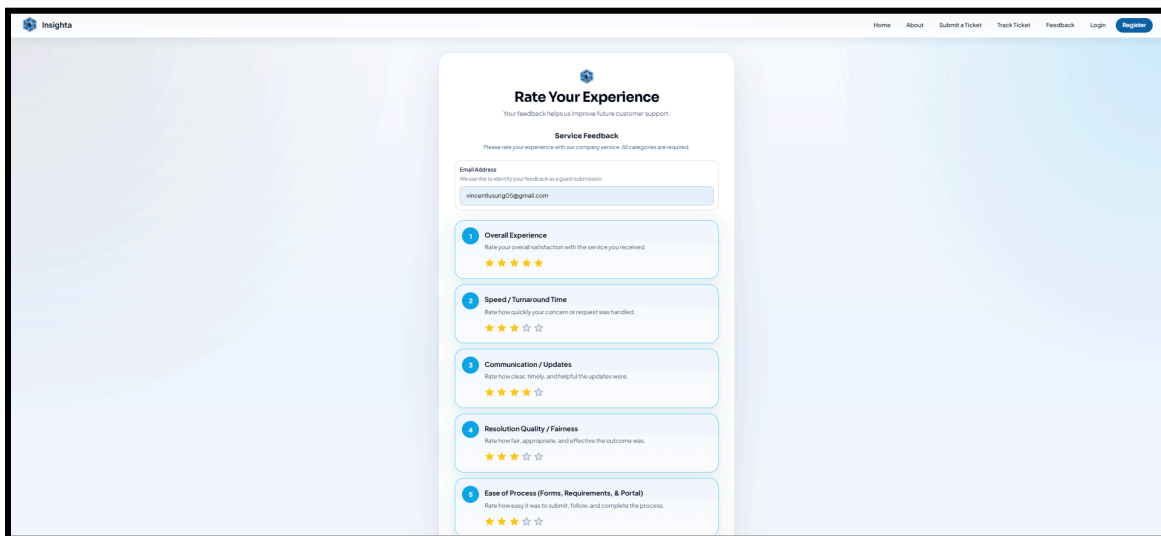

The Track Ticket page allows users to check the status of their submitted complaint. Users can enter their ticket ID or access token to view updates regarding their complaint. The page displays information such as the ticket status, progress of the resolution, and any updates made by the support staff. This feature helps users stay informed about the handling of their concerns.

The screenshot shows the 'Track Ticket' page of the Insighta website. The page has a light blue background with a white central form. The form is titled 'Track Ticket' and includes instructions: 'Enter your tracking number to check the status of your complaint.' and 'Enter your ticket access token' with a sub-note 'Use your tracking number from the confirmation screen to check your ticket status.' There is a text input field labeled 'Tracking Number' containing the text 'TRK-1782-8292-1110'. Below the input field is a blue 'Search' button. The website's navigation bar at the top includes links for Home, About, Submit a Ticket, Track Ticket, Feedback, Login, and a Register button.

Feedback

The Feedback page allows users to provide feedback after their complaint has been resolved. Users are required to enter their email address and provide a star rating to indicate their level of satisfaction with the service. This feedback helps the organization evaluate the quality of their customer support and identify areas for improvement.

The screenshot shows the 'Rate Your Experience' page of the Insighta website. The page has a light blue background with a white central form. The form is titled 'Rate Your Experience' and includes the sub-header 'Service Feedback' with the note 'Please rate your experience with our company service. All categories are required.' There is an 'Email Address' input field with the text 'vincenluang2@gmail.com'. Below this are five rating sections, each with a star rating: 1. Overall Experience (5 stars), 2. Speed / Turnaround Time (4 stars), 3. Communication / Updates (4 stars), 4. Resolution Quality / Fairness (4 stars), and 5. Ease of Process (Forms, Requirements, & Portal) (4 stars). The website's navigation bar at the top includes links for Home, About, Submit a Ticket, Track Ticket, Feedback, Login, and a Register button.
