BACKGROUND OF THE CLIENT

Malayan Insurance Philippines is one of the country's leading non-life insurance providers. Like many financial institutions, it receives a high volume of customer complaints and feedback through various channels email, online forms, and service desks-covering issues such as billing disputes, insurance claims, and account access.

How Insighta Can Help

Malayan's complaint handling involves multiple channels and processes, which can be challenging to manage efficiently at scale. Insighta was proposed to help streamline this workflow by introducing automation, improving visibility, and supporting more data-driven complaint and feedback management.

WHY AN IMPROVED SYSTEM IS NEEDED

Current complaint handling processes can be time-consuming when managed manually, which may lead to slower response times, limited visibility, and difficulty identifying recurring concerns. With a more streamlined and automated approach, management can better monitor service quality and respond more consistently to customer needs.

- No automated classification or prioritization of complaints
- Urgent complaints often go unaddressed in time
- No centralized dashboard for management analytics
- Risk of data breaches due to lack of access controls

REGISTRATION & LOGIN PAGE

Insighta uses a secure authentication system for all registered users. Accounts are pre-provisioned. there is no self-service sign-up. Guest users may submit complaints without logging in but must provide a valid email.

- Register requires: Email, Password, First & Last Name
- Invalid credentials are rejected with proper error handling
- Secure logout terminates the session completely
- Role-based redirection: Customer → ticket view, Staff → assigned tickets, Admin → full dashboard
- Account recovery mechanism available for authorized users
- Guest users receive one-time tracking links via email

CRUD OPERATIONS IN INSIGHTA

Every core module in Insighta performs Create, Read, Update, and Delete operations on the database to support the full complaint lifecycle.

These operations are enforced through role-based access — ensuring only authorized roles can perform specific actions on tickets, categories, users, and feedback records.

Operation	Example
Create	Submit a new complaint ticket; add a complaint category
Read	View ticket status; load dashboard analytics
Update	Staff updates ticket status; Admin edits category name
Delete / Deactivate	Admin deactivates a category; close a resolved ticket

DATABASE

All data submitted through Insighta is stored persistently in a relational database. No data is held in memory only every ticket, user action, attachment, and notification is written to and read from the database in real time.

Supabase

Postgress Development Platform

Generous Free Tier for Projects

DATABASE CONNECTION

Every complaint submission triggers a database write (Ticket + TicketStatusHistory)

User authentication checks credentials against the User table

AI analysis results (sentiment, priority, intent) are saved back to the Ticket record

Attachments are stored with file path references in the Attachment table

All activity is logged in SystemActivityLog for audit compliance

DATABASE SESSIONS

Session Creation — Generated upon successful login with role-based token/session ID

Session Validation — Every protected page checks for a valid, active session before rendering

Session Termination — Logout destroys the session; idle sessions expire automatically

Activity Logging — All session events (login, logout, access attempts) are written to the SystemActivityLog table

DATABASE DESIGN OVERVIEW

Insigha's database is structured around 9 core entities supporting the full complaint ticketing lifecycle.

User & Access

User — Stores registered users with credentials and role (Customer, Staff, Admin)

GuestContact — Stores guest email for unregistered submitters

SystemActivityLog — Logs all login attempts and user actions

Ticket & Workflow

Ticket — Central entity: complaint details, status, priority, sentiment, AI fields

TicketStatusHistory — Full audit trail of every status change with timestamps

Attachment — Uploaded files linked to a ticket

ComplaintCategory — Lookup table for categories with active/inactive flag

Feedback & Notifications

Feedback — Post-resolution satisfaction ratings and comments

Notification — Records of all emails/alerts sent to users on ticket updates

CONCLUSION

AND RECOMMENDATIONS

insighta addresses Malayan Insurance's core operational challenge the inefficient, manual handling of customer complaints. By integrating AI-driven classification, a transparent ticket tracking system, and a secure role-based architecture, the system dramatically reduces resolution time while improving customer trust and management visibility.

Key takeaways from Insighta

- AI automates complaint triage, freeing staff for resolution work
- Role-based access and session management ensure data security and compliance
- All data is stored, auditable, and reportable through the Admin dashboard
- The modular design supports future scaling and feature additions
